

## **Turf Aeration/Fertilization**

Weather depending, we will begin turf plug aeration and fertilization application in the Master Common Areas/private contracted lawns beginning **Monday, Apr. 1**. Proper turf aeration provides for efficient use of water as it allows for greater penetration of surface applied irrigation water and minimizes surface run-off. Additionally, the aeration allows for the introduction of air into the soil which diminishes compaction and promotes soil health and root growth. If your private yard in The Settlement or Old Town is one that would be aerated, please help the crews by keeping your yard cleared of any debris and especially dog poop!
